Self-drive Women

Sanjana Mukherjee & Mohana Meher

Problem Statement

Safe Zone: For Women who self drive to work

What if you're stranded in an unknown place and your phone has run out of battery??

Or what if you got mugged middle out of nowhere??

Should you be left helpless in such a situation ???

SOLUTION-1

Using *safe-bands* as an alternative...

- Send alert messages with user location to the emergence contact that she sets if help option is triggered.
- Ringing the contact's phone using virtual agents to communicate.
- Providing the nearest available help centres address. (police stations and hospitals etc..)

Solution 2! (In case your phone is working but you are stranded in an unknown location)

- Heat map of all the unsafe places around the current user's location.
- Criteria considered for Heat map presently - Crime rate vs Real time traffic
- Crime rate and Traffic data scaled down to 1-10
- Both criterias have been combined into the heat map.

Cost in development

- Using Google API tools.
- Collection of dataset from various sources on crime rates at different location

Market plan

Target the numerous smart and digital watch companies to use these useful results in their products at monthly costs.

Can also be used in any designer bands.

We can add more features depending on their personal requirements at a cost.
